

Mounting instruction for HP Free Wall with glue

Printouts

Unpack rolled printouts and make sure that received product is correct. Check if it is not damaged, defective, if the size is correct etc.

Recommended

A help of another person during sizing is invaluable. Draw vertical lines on the wall where edges of wallpaper should be placed.

Every self adhesive wallpaper (vinyl) produced by our company goes through a quality check point where the measurements and quality of the picture is being checked. It is very important that you do NOT start hanging the vinyl onto the wall, before you check that the image and panels fit. To do so please place the vinyl on clean and dry surface (floor).

This will give you an exact idea on how to start hanging the wallpaper.

Wall preparation and mounting instruction

1. Prepare your wall - the wall should be free of loose paper or paint. It should be reasonably flat and clean. If the wall is dry seal it first with a coat paste prior to hanging (priming process which increases adhesion of the wallpaper to the wall).

2. This wallpaper has been printed on HP Free Wall Printing paper (165g/sqm), odor free material which doesn't contain PVC, very easy to mount, pre-coated with wallpaper glue (just spread the water on the back side of the wallpaper and put onto the wall). Printed in the newest, 100% environmentally friendly and health safe Hewlett Latex Printing Technology. Do not soak or fold panels.

3. Hang panels from top to bottom and brush using a paper hanging brush or damp sponge. Gently brush out any large bubbles to edge of panel. Small bubbles will disappear once it dries.

4. Hang the rest of the wallpaper, in the same way that you hung the first section.

5. These murals are printed on wet strength paper and can stretch by up to 10mm when wet and applied to the wall.

Please ensure that you apply all panels with the same manner to ensure perfect match.

Important

It is necessary to keep the equal time of wetting every piece of wallpaper for about 1,5min after distributing with water. Do it even with a stopwatch. During wetting every stripe of the paper is growing. When you lengthen time of wetting, it turns out, that the stripe may not match to another. Don't fold spread pieces during wetting like it is done normally with other wallpapers.

To hold the wallpaper firmly against the wall use wallpaper rollers or soft paint roller. Don't do it with your hand or cloth (it is easy to damage the wallpaper).

ATTENTION !

It is a photo wallpaper mural. Treat with special care (don't stretch or tighten it too much), be especially careful when hanging the wallpaper onto the wall for ex. concave corners, don't press it, because it is easy to damage it or make a hole.

Most often committed mistakes

Visible bubbles under the wallpaper - wetting time was shorter or water was distributed to the wall instead to the wallpaper (wallpaper grew on the wall instead on the floor). These will partially disappear after wallpaper gets dry, but bigger bubbles will still be visible.

Visible joints – edges of the wallpaper have not been covered with sufficient amount of water or have been too lightly pressed against the wall

Please note

Rainbow Zoom takes responsibility for the delivery of correct product, for the print quality and correct dimensions of the product provided by a customer during ordering process.

Rainbow Zoom does not take any responsibility for damages or defects occurred during unpacking, pasting or unprofessional installation of the product.

Thank you for shopping at www.rainbowzoom.eu

If possible, we would appreciate if you could send us a picture of the final effect when your product has been mounted on your wall as we would like to add it to our portfolio. Please send an image to:
